

ONE STOP FOR ALL YOUR AVIATION SUSTAINABILITY NEEDS.

4AIR offers turnkey, comprehensive, and verified sustainability programs for any flyer.

Through 4 simple levels, participants can go beyond offsetting and exceed industry commitments to make their flight a force for good. Apply programs on a per flight or down to the flight-hour, anyone can make their flying meet a sustainability goal.

CARBON NEUTRAL

The first step as we look at long term sustainability is to neutralize carbon dioxide CO₂ emissions. First we measure your carbon emissions, then we offset those emissions via third party verified carbon credits.

EMISSIONS NEUTRAL

Only about 1/3 of the climate impact of aircraft comes from CO₂ emissions, the other 2/3 comes from comes from nitrous oxides and contrail-induced cloud cover. To compensate, offset your carbon emissions by 300% to mitigate these impacts.

BEYOND NEUTRAL

Neutralizing our impact is vital, but in the long run, emission reductions are necessary. Using sustainable aviation fuel (SAF), we can reduce emissions in-sector and prevent the emissions from happening in the first place. Going beyond neutral uses efficiencies including direct SAF uplifts or via book & claim to reduce emissions by 5%.

CLIMATE CHAMPION

New technology is still needed to advance emissions reductions. Contributions to the Aviation Climate Fund directly supports research by universities to build the foundation for these future technologies.

Participating is as easy as selecting a level, 4AIR will handle the rest.

SUSTAINABLE AVIATION FUEL DOCUMENTATION AND BOOK & CLAIM

Not only can we help you find physical SAF, but we can also assist with SAF supply via Book & Claim transactions. We facilitate the physical uplift of SAF with other business aviation operators while documenting and transferring legal ownership of the scope 1 (direct) environment credit for the fuel to you. We maintain all the required documentation and can use Book & Claim to meet your ESG or compliance needs. If you can uplift physical SAF on occasion, Book & Claim can help bridge the gap between where you can and cannot find physical SAF uplifts.

REGULATORY MONITORING & COMPLIANCE

With our Regulatory Program, we monitor your flights across the globe. Should you fly into a country or region where reporting of emissions is necessary, we'll create the compliance report for you automatically. Our full-service all-encompassing program makes it feel like you have an autopilot for your emissions reporting. We can help with reporting as part of the Carbon Offsetting and Reduction Scheme for International Aviation (CORSA), the European Union Emissions Trading System (EU ETS), the United Kingdom Emission Trading System (UK ETS), or other compliance programs.
